A Blockchain Managed
Smart Contract Economy
And An infinite loop of automatic growth
In three-dimensional matrix

It was the best of times, it was the worst of times, it was the age of wisdom, it was the age of foolishness, it was the epoch of belief, it was the epoch of incredulity, it was the season of Light, it was the season of Darkness, it was the spring of hope, it was the winter of despair, we had everything before us, we had nothing before us, we were all going direct to Heaven, we were all going direct the other way--in short, the period was so. far like the present period, that some of its noisiest authorities insisted on its being received, for good or for evil, in the superlative degree of comparison only.

- Charles John Huffam Dickens

It was, as dickens said, the best of times and the worst of times, and we are grateful to be in this great age, witnessing the great transformation of the monetary and social contract. You are all pioneers of this new, disruptive economic experiment that is bound to flourish and succeed in this field. Our goal is to create a compact, decentralized, autonomous, infinite economy. Smart contracts are the economic mainstream of the future, and every experiment is bound to be meaningful. We will provide a complete product that is completely honest and transparent. It doesn't have the hype of most cryptocurrencies, the mind-boggling manipulation, the greed and deceit, and all that. This is our standard. You just have to grow as the system grows. Enjoy it.

- Parzival (lead dev, project lead)

K INTRODUCTION

Historian Yuval Noah Harari, PhD in history from Oxford University, tells the story of the increasingly mature development of science and technology represented by big data and artificial intelligence in "Homo Deus: A Brief History of Tomorrow". Human beings will face the biggest change since evolution to homo sapiens. Most people will become "worthless groups" and only a few will evolve into "spiritual being" whose characteristics have changed.

In the future, mankind will face three major problems: Biology itself is an algorithm, and life is a process of continuously processing data. The separation of consciousness and intelligence; The external environment with big data accumulation will know ourselves better than ourselves. How to treat these three major problems and how to take countermeasures will directly affect the future development of mankind.

Despite the prediction of how human beings will evolve in the future, it is an indisputable fact that human beings are relying more and more on algorithms. In today's increasingly virtualized human world, the birth of the blockchain and the emergence and development of smart contracts have perfectly combined the physical world with the simulated world. Computer programs have become the executor of contracts, integrated with transactions, and turned contract violation and dishonesty into zero probability.

The purpose of the KOC is to realize a real contract society and give back to every player with real value.

The Key of Contract (KOC) combines blockchain technology and smart contract to bring the spirit of contract into full play. Under the established consensus, people's behaviors are quantified and restricted by token rewards and punishments, which reward positive behaviors, punish negative behaviors and motivate the enthusiasm of players. Create an equal and shared value space for each player.

As Dickens said, this is the best time and the worst time. We are glad that we are in this great time and are experiencing great changes in currency and social contracts.

You will be the leader of this brand-new, subversive economic experiment, and will surely flourish and succeed in this field. Our goal is to build an infinite economy with contract as the center, power and interests sinking completely, decentralization and automatic operation. Smart contracts will be the mainstream of the economy in the future, and every experiment will be of great significance.

KOC will provide a complete product that is completely honest and transparent. It doesn't have the hype of most encrypted currencies, no psychological manipulation, and no unrealistic ideas such as greed and deception. This is KOC's standard. You only need to grow with the growth of the system. Enjoy it. KOC will use its resources to subvert the entire scattered software and economic sectors.

What is the essence of economy? How to construct a stable and sustainable economic model? How to innovate a system that can stably bring benefits to all players? KOC has done a lot of thinking. KOC decided to carry out a great adventure and social experiment.

The plot of classic movies like the movie "Ready Player One" has given KOC great inspiration. The day will come when KOC's economic model may become one of the foundations of the future contractual society.

KOC relies on the underlying technology of the blockchain to plan its economic life. On the basis of the blockchain, all KOC activities cannot be separated from smart contracts, which are our ties with everything and the world. What is the final key in an economic society dominated by smart contracts? We don't know the answer yet, and we can't even determine whether it is the real answer KOC has been chasing for, so we invite all believers and players to find the key KOC.

The KOC project was initiated by the OASIS team, whose members are composed of five members, code-named Parzival, Art3mis, Aech, Daito and Shoto. The OASIS team launched the KOC project to find the contract in the deep web.

OASIS team has been thinking about an extremely perfect mechanism that can make the project run forever. So the team tried some new ideas in KOC project. These ideas include: How to carry out Pareto improvement, how to realize Pareto optimality,

Fibonacci golden ratio point, stable income, three-dimensional matrix, gravity fund, circular rolling, interest surging, income feedback, insurance mechanism, node reward, terminator reward, recommendation ranking reward, egg and a series of exquisite designs.

KOC's three-dimensional matrix

As time goes by, you will find that the dimensions of the economic model are very important. Even, you need to lengthen the time dimension, taking years as the unit of thinking. When evaluating and understanding KOC model, we should grasp its three-dimensional matrix structure.

Node matrix: Node matrix is the foundation of the whole model. Everything starts here. They are the initial promoters and the most determined crowd of the system operation. Their impetus determines the initial starting speed of the system operation. Becoming a node means being the backbone of the system and having the opportunity to share the benefits of system growth. The premise of becoming an eternal development system is to let players become owners. The best example is Bitcoin. The withdrawal of Satoshi Nakamoto is an important factor for Bitcoin to develop to this day. KOC also adheres to this concept.

After the system is started, there will be 7 days for the key of the node to be released, and 7 days is also the time for God to create the world. During the operation of the system, the person who obtains the key of the node will obtain the node revenue according to the proportion of the smart contract in the early stage. The key of the node is very precious, because this smart contract will not be released later.

Key of Contract has eliminated the gap between trust and value transmission, benefiting tens of millions of people.

KOC INTRODUCTION

1、KOC Introduction

1.1、KOC Introduction

The Key of Contract (KOC) was initiated by five programmers (Parzival, Art3mis, Aech, Daito and Shoto) of OASIS, the founding team of technology, in the deep web. KOC has developed a unique economic operation mechanism. Under Pareto optimality, it achieves ideal resource allocation and jointly shapes a more honest, purer and freer economic ecology.

Every player who holds tokens will receive a fixed income from Ethereum after joining the system. At the same time, he or she will receive a complimentary KOC Token. Holding KOC Token will receive dividends from the OASIS team series of games.

This means that once players hold KOC, they will continue to accumulate and acquire Ethereum. The whole system is supported by an open source Ethereum smart contract to ensure transparency. It is very safe and reliable. Completely anonymous trading, simple trading methods, let each player truly control personal wealth.

1.2 Key of Contract's Vision

Let the blockchain benefit everyone and build the blockchain ecology with users.

The Key of Contract (KOC) adopts the principle of decentralized design, actively embraces the blockchain, deploys Ethereum Smart Contract, and builds a bridge between trust and value transmission. Pass on the value and repay the players.

Contract spirit

A spirit of freedom, equality and trustworthiness. Without the spirit of contract, the transaction cannot be carried out. Everyone should believe in the spirit of contract.

Completely decentralized

Key of Contract (KOC) attaches importance to the player's value. Each player can establish his own master node and node network, bringing real value feedback to the player, visible development for you, and driving force for his or her own node network. Node network interacts with you.

Fair and open

Key of Contract (KOC), the source of each transaction is clearly visible, each transaction is safe and traceable, the transaction rules are clearly announced, and players can only obtain profits according to the KOC they hold. And according to the system's original quantization algorithm, no matter what stage players join the system, their status is equal.

De-centralized transaction

It is executed by smart contract without any subjective consciousness and according to the principle of decentralized exchange.

- Buy tokens. Buy tokens and trade them to pay other players the proceeds.
- Make a profit. When other players buy KOC, they get the benefits of Ethereum.
- Return or withdraw. When the Ethereum accumulate to a certain amount, they will resume or withdraw.
- Share smart contracts .As long as players join the system, they can share it to win prizes! There is no limit on amount and level.

RADE AND CONTRACT ARE COMBINED

2、Transaction and contract are combined into one

Key of contract combines the transaction and contract into one. From the perspective of restructuring the organizational model and from the perspective of the behavior process, the algorithm written into the contract makes people have to be "honest" and makes it impossible to break the contract, thus realizing real value sharing and win-win for players.

Ethereum Revenue

Holding tokens means that every time any other player purchases tokens, you will continue to receive "free" Ethereum. Many currency holders usually report 0.25%-2% of their total investment every day, which depends to a large extent on the volume of transactions.

Fair

For users, there is no pre-mining. Developers and early contributors can only buy a small amount (no more than 1ETH per person) without additional pre-mining tokens. Tokens are very evenly distributed. Everyone has the same buying opportunity, and everyone can only get benefits according to the amount of tokens they hold. It does not charge any developer fees, is completely decentralized, cannot be tampered with, and thoroughly innovates the concept of fairness, because people who create fairness have the same rights as those who enjoy fairness.

Smart contract

The Ethereum where players enter the system is not owned by anyone or group. Through the open source Ethereum smart contract, only the Ethereum in exchange is processed. Smart contracts cannot be changed, which means that no one can "steal" the Ethereum. The entire back end is supported by smart contracts, which are located on the Ethereum blockchain and no one can close or control them. The entire back end is supported by smart contracts, which are located on the Ethereum blockchain and no one can close or control them. Smart contracts will only operate permanently in accordance with the principles of fairness, reasonableness and irreversibility.

Transparent

Players can see the complete source code of the smart contract that manages this transaction. The rules in the smart contract were clearly announced without any compromise. There is a clear culture of honesty and transparency in the community, whether you are a manager or a developer.

There is already a large community around the project, supporting many people in the community. If users have questions or just come in to say hello, please use the reception desk. Many people are committed to the success of this project and help the new comers.

VALUE FEEDBACK

3、 Value Feedback

OASIS team has been thinking about an extremely perfect mechanism that can make the project run forever. Therefore, some new concepts have been carried out in the KOC project. These concepts include: How to carry out Pareto improvement, how to realize Pareto optimality, Fibonacci golden ratio point, stable income, three-dimensional matrix, gravity fund, circular rolling, interest surging, income feedback, insurance mechanism, node reward, terminator reward, recommendation ranking reward, egg and a series of exquisite designs.

On the macro level, KOC uses blockchain technology and encrypted currency incentive mechanism model to quantify the content value and give fair feedback to each player, greatly improving the growth and promotion of KOC, making KOC truly a valuable global smart contract with many players and believers.

The asset aggregation pool on the KOC chain is awarded to the players according to the rules as the core segment of value feedback. The smart contract will take 100% of the total ETH of the asset aggregation pool on the chain as ecological bonus. In addition to the node bonus of stable income, eight bonus pools, namely the startup support bonus fund, the market support bonus fund, the recommendation ranking bonus fund, the team building bonus fund, the team ranking bonus fund and the terminator bonus fund, will be built to reward the players and promoters who jointly build the KOC ecosystem. There will be no handling fee or revenue from the developer team, which is fair and transparent. 100% will be returned in accordance with the contract.

The proportion of node dividends that KOC players can obtain stable returns to the total ETH of the asset aggregation pool on the KOC chain is: 30%, and the proportion of all other bonus pools to the total ETH of the shared asset pool is: 70%, the total bonus allocation ratio is 100%

KOC smart contract is a decentralized economic simulation algorithm. The bonus income of each newly added node is automatically distributed to all token holders instead of being owned by any central management organization. This is a real way to give value to every player according to the contract rules. Many previous systems or projects hoped to reduce the bonus allocation ratio as much as possible, hoping to make profits from it. OASIS team did not want to and would not do so. KOC hopes to improve this concept. KOC allocates 100% of the bonus to the market to maximize the

vitality of the market and benefit the leaders. The team is only the early leader of the contract and gets almost the same income as the players.

We are used to some projects, taking away the users' mainstream coins, and then giving them some tokens that have no real value. In the end, these tokens are difficult to implement. Therefore, the key to the contract does not adopt this mode. KOC gives every player the real ETH. You begin to generate income at the same time of exchange, and your income can be withdrawn immediately. While paying ETH, the smart contract also gives the user a certain Token, which is the bonus Token of OASIS ecosystem. It is equivalent to the fact that you have obtained multiple returns and also the shares of the team.

3.1 Node Dividends

In the entire KOC recommended network matrix, everything originates from the key of the original node of its initiation. Key of Contract (KOC) is opened and collected when the KOC network is started and lasts for 40,000 Ethereum blocks, so you should collect the key of the node at the first time, which is very precious. After receiving the node's key, the system officially opens the exchange. The players who have the key of the node and meet the standards in the later period can receive considerable system dividends.

KOC uses quantitative contracts to generate fixed income for players, which accounts for 30% of the total ETH aggregating and is automatically distributed by smart contracts. Many coin holders usually report 0.25% to 2% of their total investment every day, although this depends to a large extent on the volume of transactions.

KOC has realized all the functions of income distribution, token distribution and asset injection through smart contracts. It is a truly decentralized economy. The distributed income will be sent to the holders of KOC. No one can take these gains from you, they are entirely your own, either for reinvestment, or stay in the contract reserve, or withdraw them into your wallet to save! Choice is every player's right of freedom!

In many projects, early players hold a large number of cheap shares, they can always get huge profits, and eventually become systematic leechers. Ease makes people lazy. These early players did not have any motivation to drive the system. They just needed to make profits. KOC broke this mechanism and your investment will be

forced to stop when you get 1.2 times the ETH income. However, this is a win-win situation. Investors have obtained stable returns, but withdrawal encourages them to re-enter or expand the market and lead their own node network. These reinvested funds have pushed forward the whole system.

Stable revenue mechanism enables players of smart contracts to benefit fairly. Early players did not have a starting advantage. No matter at what stage you join the system, you are on an equal footing with others.

3.2 Start Support Funds

Every new player who joins the system has a player to lead. KOC calls it the leader. The role of the leader is to help you understand how the entire smart contract works. To help you find more believers, at the same time, the leader will provide you with a market "start-up fund", which will be accounted into your static investment share. At present, we have not seen a similar design in any system to support our partners and then make profits. This is a tremendous change. It brought everyone closer together. Market support is not one-off, it is permanent, and your repeated investment will be supported by the leader's startup support fund.

This part accounts for 10% of the total ETH you put into the system and will be allocated by your leader.

3.3 Market Support Bonus

You need to distinguish start-up support funds from market support bonuses. The market start-up fund you receive from the leader is called "start-up support fund". As a leader, after you help the market and spend the "startup support fund", the system will reward you with 3 times the market support bonus of the "startup support fund".

3.4 Recommended Ranking Awards

In order to inject more vitality into the contract, KOC set up a recommended ranking competition. Every 40,000 blocks are settled, and this part of the reward accounts for 5% of the total ETH aggregating, which is automatically distributed by the smart contract according to the list. Every 40,000 blocks are settled, and this part of the reward accounts for 5% of the total ETH aggregating, which is automatically distributed by the smart contract according to the list. This award will encourage the market to expand continuously. The more players participate, the more popular smart contracts will be, and the blockchain and the world will be contracted.

3.5 Team Building Awards

KOC has designed a three-dimensional recommendation network matrix, which is the foundation of the system's continuous growth. You have your own 12-layer sharing network system, and the whole system is matrix structure, which avoids cheating in a single structure and enables players of the project to focus more on searching leaders and players. Due to the existence of recommendation matrix, the system has the power to keep moving forward.

This part of the reward accounts for 29% of the total ETH aggregating, and is automatically distributed by smart contracts.

You will be rewarded for sharing your network in the next 12 levels as follows:

The 1st level, the market support bonus;

The 2nd floor, 6%;

The 3rd floor, 5%;

The 4th floor, 4%;

The 5th floor, 3%;

The 6th floor, 3%;

The 7th floor, 2%;

The 8th floor, 2%;

The 9th floor, 1%;

The 10th floor, 1%;

The 11th floor, 1%;

The 12th floor, 1%.

3.6 Team Ranking Awards

KOC has set up a team ranking competition, and your team benefits are ranked throughout the contract. Once every 40,000 blocks are settled, this part of reward does not occupy the total amount of ETH aggregating in the system, and the income of the initial master node of the system is returned and automatically distributed by the smart

contract. To truly sink interests.

3.7 Terminator Award

KOC has set up a terminator award, which accounts for 5% of the ETH aggregating. If the player's current conversion block differs from the previous player's conversion block by 240 or more blocks, you will receive a terminator award, as long as the players participating in the award block will allocate half of the terminator award pool according to the investment proportion. This part of the reward accounts for 5% of the total ETH aggregating and is automatically distributed by the smart contract.

3.8 Eggs

The key to the contract KOC has set up an egg award, which accounts for 1% of the total amount of ETH aggregating in the system. The system will launch an egg every 40,000 blocks. You only need to guess the hidden address contained in the egg and send a transaction of 0ETH to the hidden address to prove that you are the first to open the egg. At the same time, you will receive an egg award of 1% of the total amount of the system if you ask the OASIS team for a bonus in the community.

KOC pursues the eternal operation of smart contracts, so KOC's total bonus allocation ratio is 100%, which is the ultimate mission of the contract key.

For example: After you have established a network belonging to your master node, your friends purchase 10ETH from your master node. You need to allocate 1ETH as starting support fund, and you can immediately earn an additional 3ETH of market support bonus income. All levels of the three-dimensional recommendation network matrix contribute 2.9ETH, which is included in the master node bonus pool 3ETH generated by the quantitative contract. The recommended ranking bonus pool, terminator bonus pool and egg bonus pool are 1.1ETH in total.

PLAY AND EARN KOC

4、 Play and earn KOC

When players participate in smart contracts in the KOC encrypted currency field, they will be able to experience the pleasure of smart contracts, and players will gain eternal power value in the time crystal for the first time in history.

Panic selling, misinformation, reply, FOMO, hype cycle, competitors, uncertainty, collapse, surge. This is all part of smart contract simulation avoidance.

Over time, price volatility and turnover are the only best indicators to measure the health of smart contracts. The two stages of buying (peak) and extracting (collapse) are essential. When new players buy in, the overall asset value of the existing players is higher and they will receive ETH reward. When you withdraw, you can reinvest and buy more tokens to increase your ranking in the next round of gains.

4.1 Three-dimensional Matrix of KOC

As time goes by, you will find that the dimensions of the economic model are very important. Sometimes, you need to pull the time dimension to the crystal latitude and use the time crystal to find perpetual dynamics. When evaluating and understanding KOC model, we should grasp its three-dimensional matrix structure.

Node matrix

Node matrix is the foundation of the whole model. Everything starts here. They are the initial promoters and the most determined crowd of the system operation. Their impetus determines the initial starting speed of the system operation. Becoming the master node means being the backbone of the system and having the opportunity to share the dividends of system growth. The premise for KOC to grow into a long-term system is to let players become firm owners. The best example is Bitcoin. The withdrawal of Satoshi Nakamoto is an important factor for Bitcoin to develop to this day. KOC also adheres to this concept. After the system is started, there is a 7-day release time for the key of the node, because it also takes 7 days for God to create the world. Players who obtain the key of the node will obtain the node value according to the proportion of the previous smart contract during the operation of the smart contract. The key of the node is very precious, because the later smart contract cannot be released.

KOC smart contract is a decentralized economic simulation algorithm. The bonus income of each newly added node is automatically distributed to all Token holders instead of being owned by any central management organization. Due to the difference in each player's decision-making, there will be different income effects. For example, some players choose to invest a lot at the beginning, some players choose to find more practitioners, and some players choose to keep returning. These operations lead to fluctuating income.

KOC is a virtual reality economy. It simulates a Pareto improvement and finally realizes Pareto optimality. Pareto optimality refers to an ideal state of resource allocation. For an inherent group of people and allocatable resources, if the change from one allocation state to another makes at least one person better without making anyone worse off, this is the improvement of Pareto. Pareto's best state is that it is impossible for more Pareto to improve. In other words, it is impossible to improve the situation of some people without hurting anyone else.

KOC has realized a variety of passive Pareto improvements, thus allowing the whole system to achieve Pareto optimality. The process of users exchanging KOC Token starts Pareto improvement, and each operation of the player makes the system closer to Pareto optimal state.

Quantitative contract

The first improvement is quantitative contract, which can generate fixed income. In many projects, early players hold a large number of cheap shares, they can always get huge profits, and eventually become systematic leechers. Ease makes people lazy. These early players did not have any motivation to drive the system. They just needed to make profits. KOC broke this mechanism and your investment will be forced to stop when you get 1.2 times the ETH income. However, this is a win-win situation. Investors have obtained stable returns, but withdrawal encourages them to re-enter or expand the market. These reinvested funds have pushed forward the whole system.

Stable revenue mechanism enables players of smart contracts to benefit fairly. Early players did not have a starting advantage. No matter at what stage you join the system, you are on an equal status with others. This is very important because when people feel that the rules are unfair, they will stay away from the system and will

not join. **The principle of fairness and justice is a prerequisite for the permanent operation of the system.**

Quantification contract is a unique encrypted currency exchange contract, which allows you to exchange KOC Token with ETH. KOC is ERC-20 token. There are some clever conversions here. Every time others exchange KOC Token, everyone involved in the quantitative contract will receive direct income from Ethereum. KOC has realized all the functions of income distribution, token distribution and asset injection through smart contracts. It is a truly decentralized economy. The distributed income will be sent to the holders of KOC. No one can take these gains from you, they are entirely your own, either for reinvestment, or stay in the contract reserve, or withdraw them into your wallet to save! Choice is every player's right of freedom!

In addition to a stable 1.2 times ETH income, players will receive KOC Token according to a fixed proportion for each exchange. KOC Token will be the basic equity Token for the whole OASIS ecosystem in the future. After the exchange, KOC Token can directly enter the market for circulation transactions without any restrictions.

In order to get more benefits from quantitative contracts, you need to understand compound returns. Compound interest refers to what happens when you can accumulate more and more things based on your existing assets. In this case, reinvest with your reward to get more KOC Token. In this way, after several times, you will get very considerable benefits.

Gravity fund

The second improvement is the gravity fund. When the player obtains the income and withdraws from the system, 20% of the fund will be invested into the gravity fund. The function of this part of the fund in the contract is to keep the player's coordinates in the system and all the network relationships, thus enabling the player to re-invest at the original point. Gravitational fund improves the retention of funds in the system and increases the stability and stickiness of the system.

Recommended Network Matrix of Rolling Cycle

KOC does not have a hierarchy of members. It does not force you to invest a large amount of money at the beginning, obtain the corresponding level, and then obtain the income.

Smart contracts will be treated equally and all players will receive the same multiple of benefits. Each player can evaluate and make a choice according to his own financial situation. This choice is completely voluntary and not mandatory, and there is no condition to induce you to inject more funds. The only situation is when your knowledge and experience of smart contracts are clear enough, you are free to choose.

After you participate in the smart contract, you can recommend more players to join. In the key of the contract, you can become the master node by only investing 0.01 ETH, and then start looking for more leaders and players.

Under the effect of quantitative contract and gravity fund, players have enough motivation and willingness to rejoin the contract, thus constantly pushing the system forward from the bottom.

Recommend network matrix is the basis of the system's continuous growth. The system has designed a 12-layer sharing network system, and the whole system is matrix structure, which avoids cheating in a single structure and enables players of the project to focus more on finding leaders and players. Due to the existence of recommendation matrix, the system has the power to keep moving forward.

The recommended network matrix, quantitative contracts and rolling cycle mechanism form a sustainable cash flow system.

The vitality of systems that do not have shared networks is limited. Recommended networks can enable smart contracts to form numerous small "private contracts". With the help of blockchain and trusted smart contract technology, people can reach a consensus in the recommended network matrix.

Another problem with the traditional recommendation network is the aging of the network, which means that the people in front of the network gradually lose their vitality, no longer contribute to the system, but continue to demand from the system. KOC uses the quantitative contract matrix to fix the income of all players. To obtain further income, it must reinvest. At the same time, gravity fund ensures the relationship between the leader and the players.

When funds enter the contract again through the rolling circulation matrix, it should be noted that perhaps your position in the entire recommendation

network matrix is the top level, but when you reinvest, part of the funds enter the bottom of the network, benefiting all people, even those who are in different recommendation networks with you. The other part of the funds will be distributed in the network. Therefore, the entire recommendation network is always in a very active state. Once you set up your own network, you will get a very substantial and continuous cash flow.

From the point of view of investment income, KOC has 1.2 times of ETH stable income, as well as lucky prize income, and dividend income of node key, which meets the preferences of almost all players. This mechanism has repaired the disadvantage of unequal status of many project participants, and at the same time has continuously pushed up the level of funds through rolling cycles, terminator awards and recommendation ranking awards.

4.2 Rules for Smart Contracts

Focus on rewards. The only correct way to open KOC is to pretend that your token does not exist. Ignore your token amount, ETH/USDT, and all of this. Playing as if there were no tokens, only contracts.

Learn about compound interest. Compound interest is what happens when you can accumulate more and more things over time based on your existing KOC holdings. In this case, reinvest your reward to get more KOC tokens.

4.3 Master node

As long as you join the system, you can share your main node recommendation link with other players without any limit of amount or level, and all players will be treated equally.

4.4 The system will not charge any transaction fee.

No transaction fee is required for each transaction, whether buying or selling. 20% of the proceeds are retained as gravity fund. The fund is always yours. You can invest again at 1:1 activation.

4.5 Withdrawal income

Players can draw profits from smart contracts at any time. The number of KOC you hold will not decrease. It will be the certificate for you to obtain shares in OASIS team ecosystem. In return, the smart contract directly provides the player with Ethereum.

4.6 Fountain of Perpetual Motion

Now let's sum up, according to the above explanation. When you join the system and open the referral network. You will receive a total of 4 rewards.

First, 1.2 times the fixed income;

Second, you have invested 10% of the starting support fund.

Third, you will receive 3 times the market support bonus of the startup support fund invested.

Fourth, your referral network has a cumulative cash flow return of 29%.

The first three of these can enable you to obtain stable income with almost negligible risks, and at the same time, you can obtain income equal to or more than ETH invested with a little recommendation. Is it amazing to start the fourth sustainable cash flow income system?

The idea of perpetual motion machine originated in India. Around 1200 AD, this idea spread from India to the Islamic world and from here to the West. In history, people were keen to develop various types of perpetual motion machines, including academic masters such as Da Vinci and Joule. The establishment of thermodynamic system proves that perpetual motion machine is impossible nature.

In 2017, the existence of time crystal was confirmed, and its atomic motion does not need any external energy to maintain, which conforms to the literal definition of "perpetual motion". Researchers of perpetual motion machines have never stopped. From one side, we can also think that human enthusiasm for perpetual motion machines and various practices in manufacturing perpetual motion machines have promoted the establishment of thermodynamic systems and the progress of mechanical manufacturing technology.

This may be the window left by God and the blueprint of the universe. The idea of perpetual motion machine cannot be realized in physical level, perhaps we can make it realize in the virtual financial world. Fortunately, OASIS team has been exploring this field, and we think we have found some subtle methods to realize this great experiment. By applying these ideas to our KOC system, we can feel the great impetus of these designs.

The mechanism we mentioned is a series of complementary designs, not a single system. It summarizes the experience and lessons of financial smart contracts in history. These measures are encapsulated in the following: How to carry out Pareto improvement, how to realize Pareto optimality, Fibonacci golden ratio point, stable income, three-dimensional matrix, gravity fund, circular rolling, interest surging, income feedback, insurance mechanism, node reward, terminator reward, recommendation ranking reward, egg and a series of exquisite designs.

Gravity fund is designed to keep the original point of the system. This design makes players more willing to earn profits repeatedly at the original points. When a

player withdraws any income from the system, 20% of the amount will be automatically put into the player's gravity fund. Only when the player reaches 1.2 times the income, the player will invest again. At this time, gravity fund 1:1 activation. For example, the player has accrued 100 Ethernet lanes. When the player withdraws, the actual number of Ethereum is 80. When the player puts in 20 Ethereum again, the system calculates the income for the player according to the number of 40 Ethereum.

These funds re-entering the system are the income return funds, and the system always keeps enough funds to push the system forward.

The design of gravity fund and fixed income makes players willing to continuously join the system to obtain income. Each time the address you recommend is reinvested, you will receive a market support bonus 3 times the start-up support fund. Is it very attractive that players will get 7 times the return when they repeatedly invest in the original address for 10 times?

Fairness is our first consideration. In many games, early players held a large number of cheap shares, they can always get huge profits, thus eventually becoming systematic leechers. Ease makes people lazy. These early players did not have any motivation to drive the system. They just needed to make profits.

We broke this mechanism, and every new Ethereum put into the system will be placed in the latest position in the system queue, which is itself a push to the system. More and more players have reached 1.2 times the income, and then re-invested, the cycle goes on. Therefore, you are equal to enter the position at any time when the system is running, because the 1.2 times capped old players will increase your income when they return to the game. This kind of circular rolling design, like China's waterwheel, produces a steady stream of power.

It is amazing that as long as you enter the system and gain income from the recommended network matrix, the system has a small requirement for you. You must continuously make profits from the recommended network. When your income reaches 1.2 times the ceiling, you must invest an amount greater than or equal to the gravity fund to continue to obtain network income, and a three-day time limit is set, so the player who makes the most profits is precisely the most active player who pushes the network forward.

We know that the value created by the system comes from the multiplication and expansion of the system. Node matrix is the foundation of the whole model. Everything starts here. They are the initial promoters and the most determined crowd of the system operation. Their impetus determines the initial starting speed of the system operation.

Terminator Award is a very attractive design. The entire award pool is 5% of all the funds invested in the system. If the player's current trading block differs from the previous player's trading block by 240 blocks, he or she will receive a terminator award, and all winners will share half of the bonus pool according to the proportion of the investment amount, and the remaining half will be accumulated in the bonus

pool. The design of this award will encourage players to continuously invest to win the award. It should be noted that the terminator's minimum standard amount is an Ethernet lane.

Key of Contract (KOC) has carefully set up an egg award, which accounts for 1% of the total amount of ETH aggregating in the system. The system will launch an egg every 40,000 blocks. You only need to guess the hidden address contained in the egg and send a transaction of 0ETH to the hidden address to prove that you are the first to open the egg. At the same time, you will receive an egg award of 1% of the total amount of the system if you ask the OASIS team for a bonus in the community.

FUTURE PLAN

5、Future Plan

The Key of Contract (KOC) was initiated by five programmers (Parzival, Art3mis, Aech, Daito, Shoto) of OASIS, the founding team of technology, in the dark net, and developed a unique encrypted currency exchange mechanism. Under Pareto optimality, it achieves ideal resource allocation and jointly shapes a more honest, cleaner and freer economic ecological universe.

Every player who holds tokens will receive dividends from OASIS team series games, and at the same time, when others buy tokens in KOC project, they will receive direct income according to the number of tokens held (as a percentage of the total amount).

KOC hopes to create a value-sharing economic system that benefits everyone, bringing the pleasure of enciphering the world with new play methods, new ways and new experiences, and providing new solutions to the reconciliation between human beings and nature and creating maximum benefits with the great contract tool of blockchain.

In the future, a brand-new ecosystem will be formed by building a public chain starting from smart contracts. Each contract in the ecosystem will reward leaders and players. **Participate in KOC ecosystem and enjoy multi-dimensional benefits.** As long as you are interesting, thoughtful and open-minded, become the leader of KOC and set up your own main node and recommendation network, then you will be a member of KOC that benefits continuously. This is what makes KOC unique.

OASIS development team is used to form a brand-new ecology through a long-term vision spanning many fields.

Please think critically, keep an open mind to understand the key of the contract, grasp the key of the contract that belongs to you personally, and hope that you can get continuous benefits from it.

DISCLAIMER

6、Disclaimer

As a new industry, blockchain industry has very high investment risks and technical risks. As the technical and product description of the project, the KOC white paper describes the prospect and value of encrypted currency and does not recommend people who do not have the ability to bear risks to invest.

- This document is for information purposes only. The contents of this document are for reference only and do not constitute any investment proposal, solicitation or invitation to sell stocks or securities in the pseudo chain and its related companies. Such invitations must be made in the form of confidential memoranda and must comply with relevant securities and other laws.
- The contents of this document shall not be interpreted as forcing participation in KOC public distribution. Any act related to this white paper shall not be deemed as participation in KOC's public release, including the requirement to obtain a copy of this white paper or to share this white paper with others.
- Participating in the KOC public offering means that the player has reached the age standard, has complete civil capacity, and the contract signed with KOC is true and effective. All players signed the contract voluntarily and had a clear and necessary understanding of KOC before signing the contract.
- The KOC team will continue to make reasonable attempts to ensure that the information in this white paper is true and accurate. During the development process, the platform may be updated, including but not limited to platform mechanisms, tokens and their mechanisms, and token allocation. Some contents of the document may be adjusted in the new version of the white paper as the project progresses. The team will publish the updated contents to the public by publishing announcements on the website or the new version of the white paper. Please make sure players get the latest white paper in time and adjust their decisions according to the updated content. KOC expressly states that it will not assume any losses incurred by the players due to (a) reliance on the contents of this document, (b) inaccuracy of the information in this document, and any actions resulting from this document.

- The team will spare no effort to achieve the goals mentioned in the document. However, due to the existence of force majeure, the team cannot fully make a commitment to complete all the goals.
- As KOC's official token, KOC is an important tool for platform performance, not an investment. Having KOC does not mean granting its owner the ownership, control and decision-making power over the platform. KOC, as an encrypted token used in KOC, does not belong to any of the following categories of currencies; (a) securities; (b) equity interests in legal entities; (c) shares, bonds, bills, warrants, certificates or other instruments conferring any rights.
- The value-added of KOC depends on the market rules and the demand after the application arrives. KOC may not have any value. The team will not make any commitment to its value-added and will not be responsible for the consequences caused by the increase or decrease in value.
- To the maximum extent permitted by applicable laws, the team will not be responsible for the damages and risks arising from participating in KOC public offering, including but not limited to direct or indirect personal damages, loss of business profits, loss of business information or any other economic losses.
- The KOC platform abides by any regulation that is conducive to the healthy development of the industry and the declaration of industry self-discipline. Players' participation means that they will fully accept and abide by such inspections. At the same time, all information disclosed by players to complete such checks must be complete and accurate.
- The KOC platform clearly conveys the possible risks to the players. Once players participate in the KOC public release, they have confirmed, understood and approved the terms and conditions in the detailed rules, and accept the potential risks of the platform at their own risk.
