FAQS

Quickly jump to common parts:

What is KOC?

How much dividend/income can I get every day?

What is the primary node?

Can the website owner or anyone close it?

Can developers access wallets or funds?

What is node dividend?

If you use our main node to purchase tokens in the future, we will be very grateful.

1. What exactly is KOC?

The Key of Contract (KOC), initiated by the technology founding team OASIS (Parzival, Art3mis, Aech, Daito, Shoto), has developed a unique economic operation mechanism to achieve ideal resource allocation under Pareto optimality and jointly shape a sincere, pure and free economic ecology. KOC combines block chain technology and smart contract to bring the spirit of contract into full play. Under the established consensus, people's behaviors are quantified and restricted by token rewards and punishments. Create an equal and shared value space for everyone involved. This means that once you hold KOC, you will continue to accumulate ETH. The whole system is supported by an open source intelligent contract to ensure transparency. It is very safe and reliable. Completely anonymous trading, simple trading methods, let everyone really control personal wealth.

2. How much dividend/income can I get every day?

Since revenue is entirely based on the volume of game transactions, you cannot expect a specific amount of revenue in a day. Whenever someone buys a token in the game, the Ethereum of the allocated revenue will be sent to the token holder.

If there is no transaction in one day, your income will be zero, but you can be a leader to earn market support bonuses and participate in the competition for the eight bonus pools. Communication is very active, and many users report receiving 0.05-2% of their income every day.

3. What is the master node?

If you join the system, you can share your masternode recommendation link with others so that you can earn bonus income when purchasing tokens.

For each token purchased directly from the person who clicks on your master node link, you will receive a dividend income of 30%. For example, if a friend buys 10ETH from your masternode, you immediately earn an extra 3ETH!

Please note that the masternode recommended bonus can be collected not only when purchasing tokens, but also when your friends re-vote. to obtain this part of the proceeds, you need to return the startup support fund of 1ETH to your friends.

4. Who are the participants of this project purchased early?

During the first week of contract and project launch, some people will apply for the node key to provide feedback, audit code or otherwise facilitate the release of the project. At the beginning of the contract, these people have the opportunity to buy up to 1ETH.

Most of these participants are static and KOC will not provide the node's key system for future versions in the same way. Please note that only this part of the address can obtain KOC as early as possible, and whale protection measures are in place to prevent any wallet from purchasing more than 1 ETH or 5ETH during the early start-up window.

5. Will holders who bought tokens early gain an advantage?

All current KOC token holders (including developers themselves) in the smart contract are exactly the same. Each wallet has a certain number of KOC tokens, the details of which the holder purchases will not affect anything. On the contrary, income is fairly distributed according to smart contracts and is calculated as a percentage of the total ETH held by each participant.

The value of KOC tokens depends on intelligent contracts based on the received buy and rolling cycle matrix recommendation network. Those who buy KOC tokens when the exchange rate is low will have more purchasing power for the same amount of Ether, while the other person will buy them at a higher token price.

In addition, of course, those holders who purchased previously already have tokens for a longer period of time, thus gaining profits as new transactions are processed. However, in addition to these two points, like others, buying tokens has absolutely no "early adopters" advantage.

All in all, smart contracts treat all holders equally. Like all encrypted currencies, buying coins naturally has advantages when the exchange rate is low.

6. What exactly is a reinvestment?

The reinvestment means that you choose to receive all Ethereum income (dividends) and exchange them all for additional KOC tokens. During the reinvestment period, as with all transactions, no additional fees will be incurred. In this way, reinvesting your token can increase your shareholding, thus increasing future earnings. Think about what "compound interest" is.

7. Can the website owner or anyone close it?

The website owner can cancel the front end of the game website at any time. However, this is only a user interface and has nothing to do with the smart contract of the whole system.

Once deployed, smart contracts are immutable, which means owners cannot change codes except in very limited ways that are pre-programmed into smart contracts. Developers cannot edit smart contracts either.

Even if the primary switch is shut down, you can use the backup site to perform all the same functions. Even if every network front-end is shut down, the smart contract supporting all content can still be fully operational and can interact directly through MetaMask.

No government, company, judge or website owner can close the smart contract. The contract will be deployed to the Ethereum network and will operate normally until the last Ethereum node is shut down.

8. Can I access KOC through my mobile phone?

Yeah! You can install imtoken or TrustWallet on iOS or Android and enter the same seed word as MetaMask, or create a new Ethereum address to fully access your Ethereum wallet through our mobile interface! We have full functional compatibility in TrustWallet and imtoken. You can easily send, receive and purchase KOC to earn Ethereum.

9. What is Terminator Award?

Terminator Award is a very attractive design. The entire award pool is 5% of all the funds invested in the system. If the player's current trading block differs from the previous player's trading block by 240 blocks, he or she will receive a terminator award, and all

winners will share half of the bonus pool according to the proportion of the investment amount, and the remaining half will be accumulated in the bonus pool. The design of this award will encourage players to continuously invest to win the award. It should be noted that the terminator's minimum standard amount is an Ethereum.

10. What is an Egg Award?

The key to the contract KOC has carefully set up an egg award, which accounts for 1% of the total amount of ETH aggregation in the system. The system will launch an egg every 40,000 blocks. You only need to guess the hidden address contained in the egg and send a transaction of 0ETH to the hidden address to prove that you are the first to open the egg. At the same time, you will receive an egg award of 1% of the total amount of the system if you ask the OASIS team for a bonus in the community.

11. What is the recommended ranking award?

In order to inject more vitality into the contract, KOC set up a recommended ranking competition. Every 40,000 blocks are settled, and this part of the reward accounts for 5% of the total ETH aggregate, which is automatically distributed by the smart contract according to the list. During the whole cycle, the top 10 players recommended to meet the market standards will be awarded according to the proportion of the individual amount of players. This award will encourage the market to expand continuously. The more players participate, the more popular smart contracts will be, and the block chain and the world will be contracted.

12. What is node dividend?

KOC uses quantitative contracts to generate fixed static income for players, which accounts for 30% of the total ETH aggregation and is automatically distributed by smart contracts. Many currency holders usually report 0.25% to 2% of their total investment every day, although this depends to a large extent on the volume of transactions.

13. What is the startup support fund?

Every new player who joins the system has a player to lead. KOC calls it the leader. The role of the leader is to help you understand how the entire smart contract works. To help you find more believers, at the same time, the leader will provide you with a market "start-up fund", which will be accounted into your static investment share. At present, we have not seen a similar design in any system to support our partners and then make profits. This is a huge change. It brought everyone closer together. Market support is not one-off, it is permanent, and your repeated investment will be supported by the leader's startup support fund.

This part accounts for 10% of the total ETH you put into the system and will be allocated by your leader.

14. What is the market support bonus?

You need to distinguish start-up support funds from market support bonuses. The market start-up fund you receive from the leader is called "start-up support fund". As a leader, after you help the market and spend the "startup support fund", the system will reward you with 3 times the market support bonus of the "startup support fund".

TEAM OASIS'S MASTERNODES

Love the KOC project? Love the five programmers from the OASIS team, buy them with their masternodes! Using someone's masternode purchase represents KOC's preference for their help.

Parzival's masternode

Art3mis' masternode

Aech's masternode

Daito's masternode

Shoto's masternode

In the future, I would be very grateful if you use my masternode to purchase tokens. You can get in touch with me at any time on Telegram.
