Novice Money Making Manual

TEAM OASIS 'S MASTERNODES

What exactly is KOC? KOC is a game to earn ETH. Compared with other projects, the difference is that the holder of KOC will directly earn 100%ETH top-up refund from the new purchaser during the currency holding period, and at the same time get KOC Token donated by the system. This Token is the bonus token of OASIS ecosystem, which is equivalent to the fact that you have obtained the shares of the team while obtaining multiple earnings.

Some projects return only 50% and 60% to the community, and KOC returns 100% to the community. The players are awarded by asset aggregation pool on the KOC chain as the core segment of value feedback according to the rules. The smart contract will take 100% of the total ETH of the asset aggregation pool on the chain as ecological bonus. In addition to the node bonus of stable income, eight bonus pools, namely the startup support bonus fund, the market support bonus fund, the recommendation ranking bonus fund, the team building bonus fund, the team ranking bonus fund and the terminator bonus fund, will be established to reward the players and promoters who jointly build the KOC ecosystem. There will be

no handling fee or revenue from the developer team, which is fair and transparent. 100% will be returned in accordance with the smart contract.
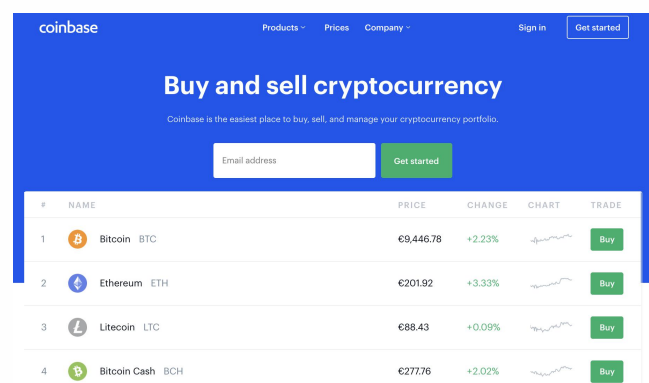

Moreover, the game is completely run on open source smart contracts. You can see any transaction. There is no possibility of cheating and it is safe and reliable.

but is it really the case?

Actual practice begins

1. Purchase ETH on the exchange, e.g. Coinbase or Huobi

ETH can be purchased directly from OTCBTC. Registration and purchase are very convenient. Alipay and WeChat can be used. You can also go to other channels to purchase, which is no problem. You can also purchase Ethereum at the Exchange: Go to Coinbase and register an account, https://www.coinbase.com/, and purchase Ethernet Square.
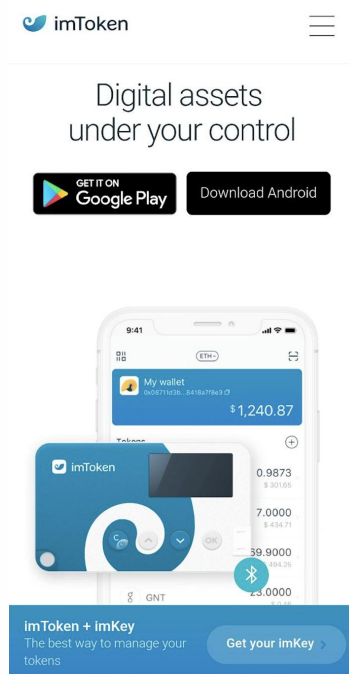

2. Install imToken or TrustWallet wallet wallet on mobile phone (Metamask wallet installed on PC)

Next, you will need to install imToken or TrustWallet, the popular android mobile phone wallet. Please note that this is a single popular project and is not directly related to KOC in any way.
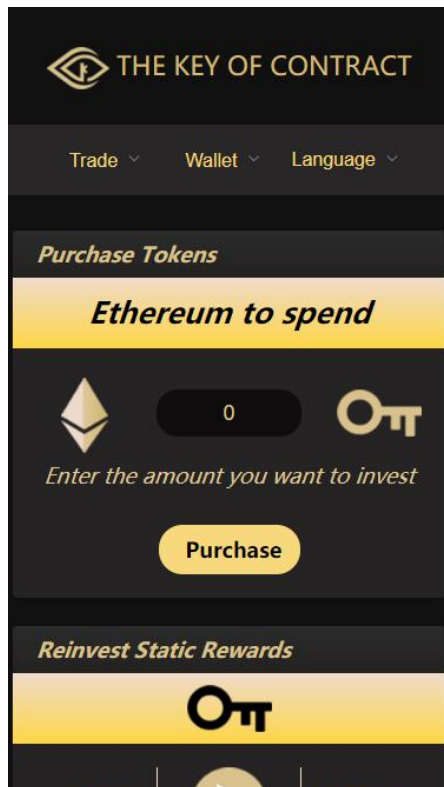

Install imtoken or TrustWallet on iOS or Android.

Start the imtoken or TrustWallet application and select "create wallet."

Withdraw the Ethereum purchased by the exchange into your imtoken or TrustWallet wallet wallet.

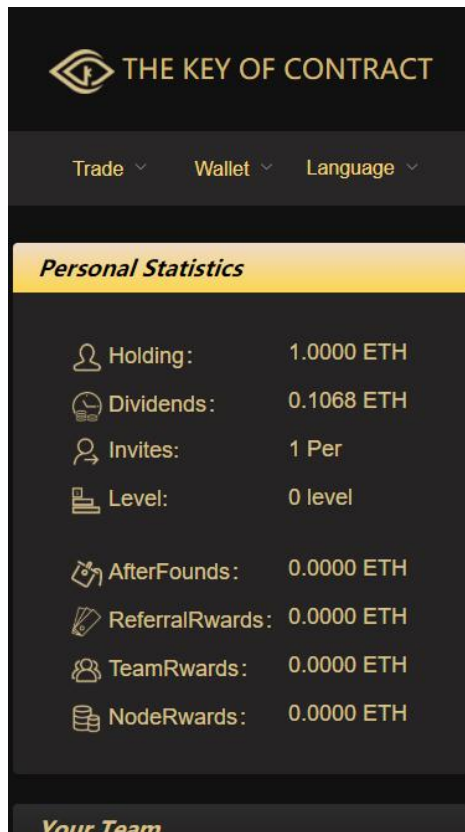

3. Purchase KOC in the game

After installing imtoken or TrustWallet, go to the "Browser" tab and visit KOC's official website or scan the leader's master node QR code. You can bookmark the site for easy access by clicking the vertical " ⋮ " next to the URL.

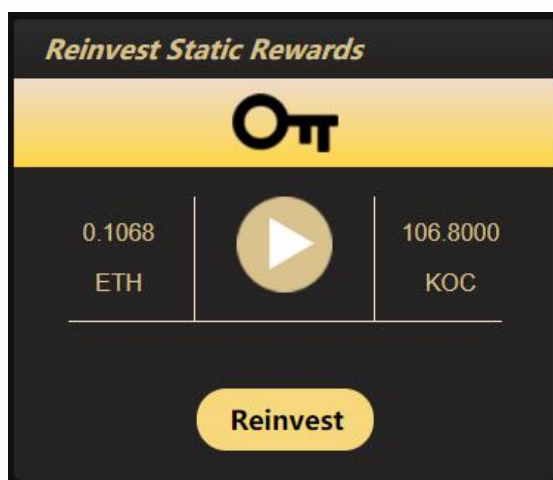

You can purchase tokens by entering a certain number of Ethereum in the text box and clicking on "Buy". When you click Buy, a dialog box will appear. Make sure the gas price (GWEI) is set to 2 or higher and click "Submit". Be careful, because setting GWEI too low can cause long time transactions.

After you have purchased KOC tokens, you can also take the following actions:

Check your account holdings (tokens and earnings)

Purchase more tokens or reinvest in earnings

Withdraw income

Check the details of the masternode

View exchanged overall statistics

Address	Recommend	WinETH
0xD8800DAbca2...	2	0.1280
0x9F1505Ac9573...	1	0.0640

4. How to make money

When you join the system and enable the recommended relationship network. You will receive a total of 4 rewards.

First, 1.2 times the fixed income;

Second, start-up support funds, 10% of what you have invested;

Third, you will receive 3 times the market support bonus for the start-up support funds invested;

Fourth, your recommended network has a 29% return on cash flow.

The first three of these allow you to get a steady return with almost negligible risk, and with a little recommendation you can get more than 20% of the invested ETH and open the fourth sustainable cash flow income. The system is very magical?

In the fourth item, this part of the reward accounts for 29% of the total system ETH aggregate, which is automatically allocated by the smart contract.

You will receive a reward for sharing your network to the next 12 levels:

Level 1, market support bonuses;

Level 2, 6%;

Level 3, 5%;

Level 4, 4%;

Level 5, 3%;

Level 6, 3%;

Level 7, 2%;

Level 8, 2%;

Level 9, 1%;

Level 10, 1%;

Level 11, 1%;

Level 12, 1%.

In addition to the 4 rewards above, we can also participate in the Terminator Rewards and Eggs competition to obtain bonuses.

Recommend a ranking contest. Each 40,000 blocks are settled once. This part of the reward occupies 5% of the total system ETH aggregate, which is automatically assigned by the smart contract according to the list. The top 10 most recommended market winners are allocated a percentage of the individual amount of the shared player throughout the cycle.

Team building rewards. Your entire team participates in the total amount of ETH, and the reward is allocated according to the proportion of the individual amount of the top 10 players.

Terminator rewards. It is a very attractive design and the entire prize pool is 5% of all funds invested in the system. If the player's current trading block differs from the previous player trading block by 240 blocks, the Terminator reward is awarded, and all winners share half of the prize pool in proportion to the

amount invested, and the remaining half is accumulated in the prize pool. This award is designed to motivate players to continually invest in winning prizes. It should be noted that the terminator's compliance amount is at least one Ethereum.

The Key Of the Contract KOC has carefully set up an egg reward, which is 1% of the total amount of system ETH aggregation. The system launches an egg every 40,000 blocks. You only need to guess the hidden address contained in the egg. Send a 0ETH transaction to the hidden address to prove that you are the first to open the egg. At the same time, in the community, ask the OASIS team to allocate bonuses to get an egg bonus of 1% of the total system amount.

The master node of the OASIS team

TEAM OASIS 'S MASTERNODES

Love the KOC project?

Love the five programmers of the OASIS team, buy with their masternodes! Using someone's master node to buy indicates KOC tends to help them.

The masternode of Parzival; the masternode of Art3mis

The masternode of Aech; the masternode of Daito; the masternode of Shoto

I would be very grateful if you would use my masternode to purchase tokens in the future. Please Feel free to contact me on Telegram.
